

## Working with the existing project

Create three github account

[Kiranchikhale.2025@gmail.com](mailto:Kiranchikhale.2025@gmail.com) -

[Kiran.chikhale@gmail.com](mailto:Kiran.chikhale@gmail.com) – kiran-2

[Kiran.futuristic@gmail.com](mailto:Kiran.futuristic@gmail.com)- kiran-3

Steps :

1. Create a repository in first account, add a file and few comment in it
2. Search that repository in other two account like `kiranchikhale/addcomment`
3. Fork that repository in other two account.
4. Go to git terminal and do ***git clone url***  
(it will download the project in your hard disk)  
Upstream URL : From where you have forked it
5. ***Git remote add myupstream url***
6. ***Git push myorigin kiran***
7. ***Git pull upstream main***
8. Make changes
9. Commit in both the account
10. Create pull request
11. In first account you will see the those pull request
12. Merge those request
13. If you want code from github use ***git fetch upstream***
